

Dear Sirs,

The Laboratory for Stem Cell Research at Aalborg University in Denmark, headed by Professor Peter Ebbesen (MD, DrMedSci), offers the following input:

New harmonised regulations should include all steps from harvesting cells, extracorporal handling and transplantation. Furthermore, both the processes (handling) and the equipment (incubators) should live up to fixed standards. In principle, all should be certified and the processes documented to prove compliance.

Yours sincerely,

Peter Ebbesen  
Professor
