Health status & social determinants of health of populations facing multiple vulnerability factors

Médecins du monde (MdM) – Doctors of the World International Network's Observatory of Access to Healthcare

- Expert Group on Health Information
- 27/11/2014 Nathalie Simonnot & Frank Vanbiervliet
- Report co-author Dr Pierre Chauvin, Director of Research at INSERM, Head of the Department of social epidemiology, Pierre Louis Institute of Epidemiology and Public Health, INSERM & Sorbonne Universités

Doctors of the World – who we are & what we do

- → an independent international movement working across the world (78 countries), both at home (169 programmes) and abroad (147 programmes)
- → in Europe: asylum seekers, undocumented/ migrants, homeless people, Roma communities, elderly, destitute EU migrants or destitute nationals, drug users, sex workers
- → medical & social service delivery data collection on persons not described in official statistics social change through empowerment & advocacy

METHODS

- Routine data collected in MdM free centres for access to health care in 25 cities of eight European countries
- 29,400 social and medical consultations for 16,881 persons
- Common, multilingual, social and medical questionnaire gathered in a single database
- Statistics: weighted average proportion (WAP), giving the same weight to every country

RESULTS: nationalities and residence status

- 95% are migrants
- Raise in patients from the Near and Middle East between 2012 and 2013 (from 5 to 12%)
- Dominant nationalities in EL: Afghans, Greeks and Syrians
- Average length of stay in the host country = 32.5 months
- 48.6% are undocumented migrants from a non EU country
- 7.9% are EU citizens without authorisation to reside (on a total of 14.9%)
- 15.5% are asylum seekers & 38.0% have been concerned by an asylum request

RESULTS: living conditions

- 62.4% live in unstable accommodations
- 34.8% esteem that their housing affects their & their children's health
- 15.6% have no one to rely on in case of needs
- 76.3% have experienced violence :
 - 77.3% of men and 42.4% of women have lived in countries at war
 - 20% of the women have suffered psychological violence
 - 10% have been sexually assaulted or molested
 - 6% of women have been raped
- About 20% of the experiences of violence occur after arrival in the "host" EU country

RESULTS: health conditions

- 26.1% are in poor or very poor perceived health (9.7% among the general population in the EU)
- 27.6% in poor or very poor mental health
- Diagnosed health problems
 - mainly gastro-intestinal, cardiovascular, muscle-skeletal
 - and psycho-psychiatry (10.4%): anxiety, stress, psychosomatic disorders and depression
- 4 patients out of 10 required essential treatments according to physicians
- Nearly 30% of patients had a health problem that had never been treated before coming to MdM

Pregnant women and children

Pregnant women

- 30% have nobody to rely on in case of needs
- 89.1% < poverty threshold of the host country
- 63.7% have no residence permit
- 83.5% have no health care coverage
- 65.9% had no access to prenatal care
- 42.8% had received late prenatal care- among those who had access (i.e. after the 12th week)

Children

- Only 50% are vaccinated against tetanus
- 70% are not vaccinated (or don't know if they are) against HBV, measles, and/or whooping cough

RESULTS: barriers to health care

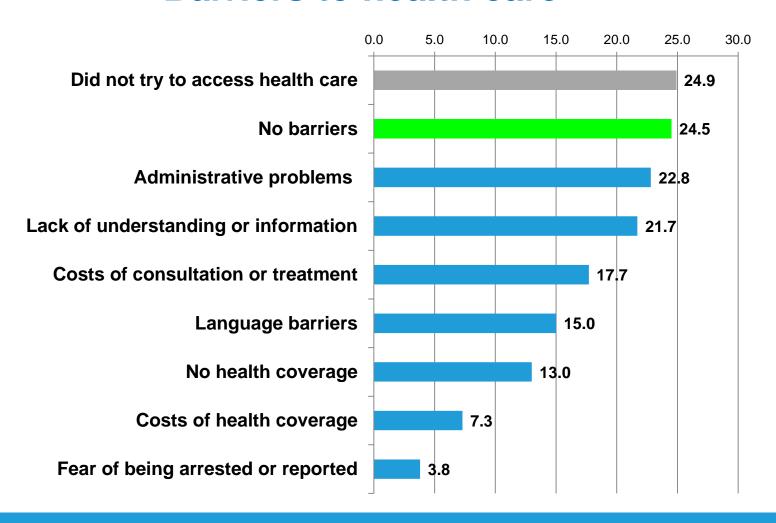

- 64.5% without any health coverage at the time of the consultation...
- Financial barriers = 25,0%
- Administrative barriers = 22.8%
- Poor understanding or lack of knowledge of rights and system organization = 21.7%
- Language barriers =15.0%
- As a result, 22.1% have given up seeking care or treatment in the last 12 months

The myth of migration for health / healthcare tourism

- Migrants consult very late: average length of stay is near 3 years
- Only 13.6% of patients had a condition that they knew about before migrating
- Poor understanding or lack of knowledge of individual rights and of the rules of the system is a major barrier (21.7%)
- Of the reasons for migration, health reasons represented only 2.3%
 - economic survival (47.2%), political, religious, ethnic or sexual orientation (24.2%), to join or follow someone (14.6%), to escape from war (6.9%), etc.

CONCLUSIONS & REMARKS

- Population groups that face many vulnerability factors are exposed to living conditions that are devastating for their health, and face many barriers to healthcare
- Barriers have increased since the crisis and austerity measures
- These groups face a permanent circle of invisibility: difficult access = hardly any data = little research = little policy attention = barriers remain
- Risk that data without context is interpreted by policy makers in a stigmatising way (e.g. "migrants as vectors of infectious diseases")

OUR DEMANDS Universally accessible healthcare systems

- Universal public health systems built on solidarity, equality and equity, open to everyone living in all EU Member States, rather than systems based on a profit rationale
- Coherent infectious disease policies across Europe, i.e. without excluding anybody – cf. ECDC recommendations
- The protection of seriously ill migrants who cannot access adequate healthcare in their country of origin (cf. Parliamentary Assembly of the Council of Europe)
- In order to achieve more universal access, groups facing multiple vulnerability factors need to be rendered more visible in national and international health data collection systems.
