
The WHO Hub for Pandemic and Epidemic Intelligence

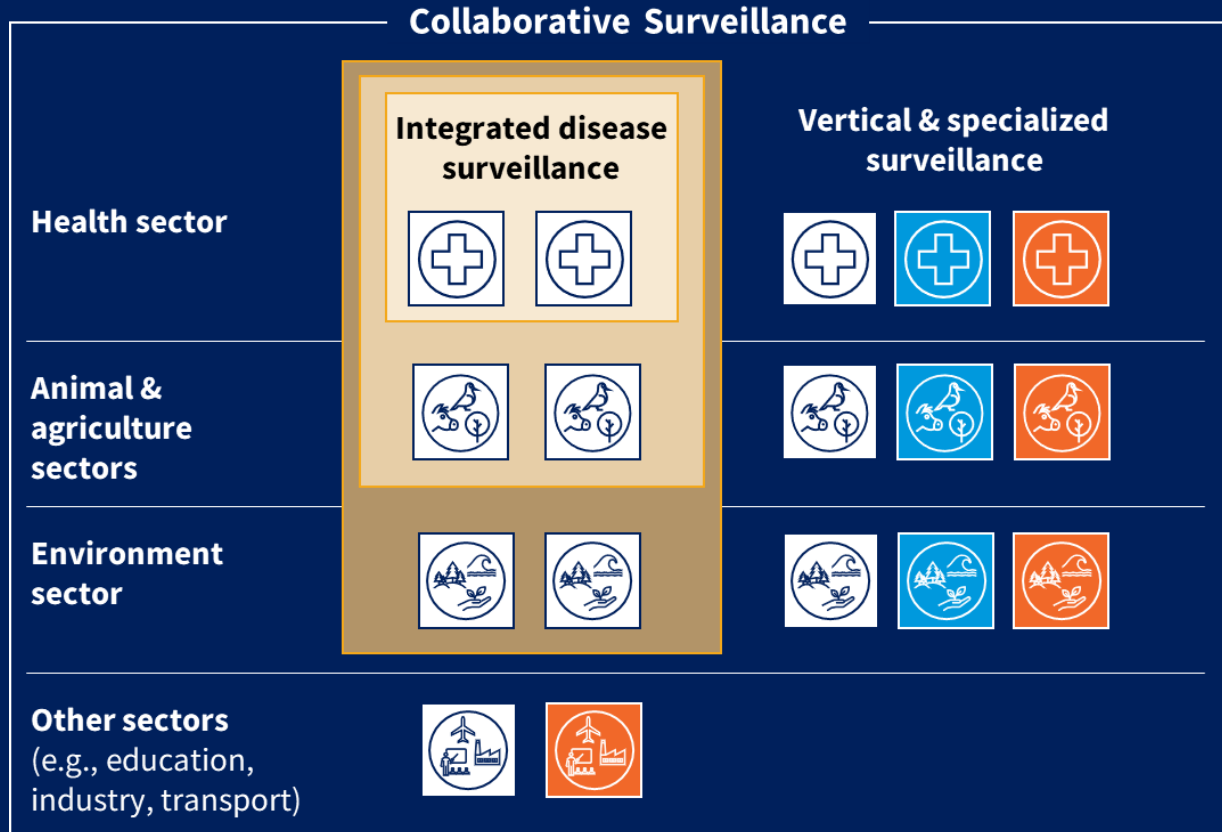

*‘One Health for all, all for One Health’
Conference*

13 November 2023

**World Health
Organization**

Collaborative Surveillance

- Specific hazard, threat, risk, approach, or intervention**
(e.g., malaria, cyclones, AMR, genomics, vaccine coverage, vector populations)
- Health care and veterinary service capacity, access, and usage, and environmental monitoring**
(e.g., hospital occupancy, availability of therapeutics, water and air quality)
- Other insights**
(e.g., on contexts & community dynamics, behaviour, capacities and vulnerabilities)
- Scope of integration***

** The scope of IDS varies by country and context. Multiple surveillance activities across sectors, whether integrated or vertical/specialized, can contribute meaningfully to One Health intelligence and joint multisectoral risk assessment.*
