## Summary text

On the whole, Slovenian respondents are more positive emotionally than Europeans on average. More Slovenian respondents experienced three of the four positive emotional statements 'all' or 'most of the time' (specifically 'happy', 'full of life' and 'lots of energy') while fewer experienced four of the negative statements 'all' or 'most of the time' (specifically 'downhearted and depressed', 'tense', 'worn out' and 'tired'). The only exception to this more positive trend was that fewer respondents than average felt 'calm and peaceful' 'all' or 'most of the time' (56% vs. EU average of 61%).

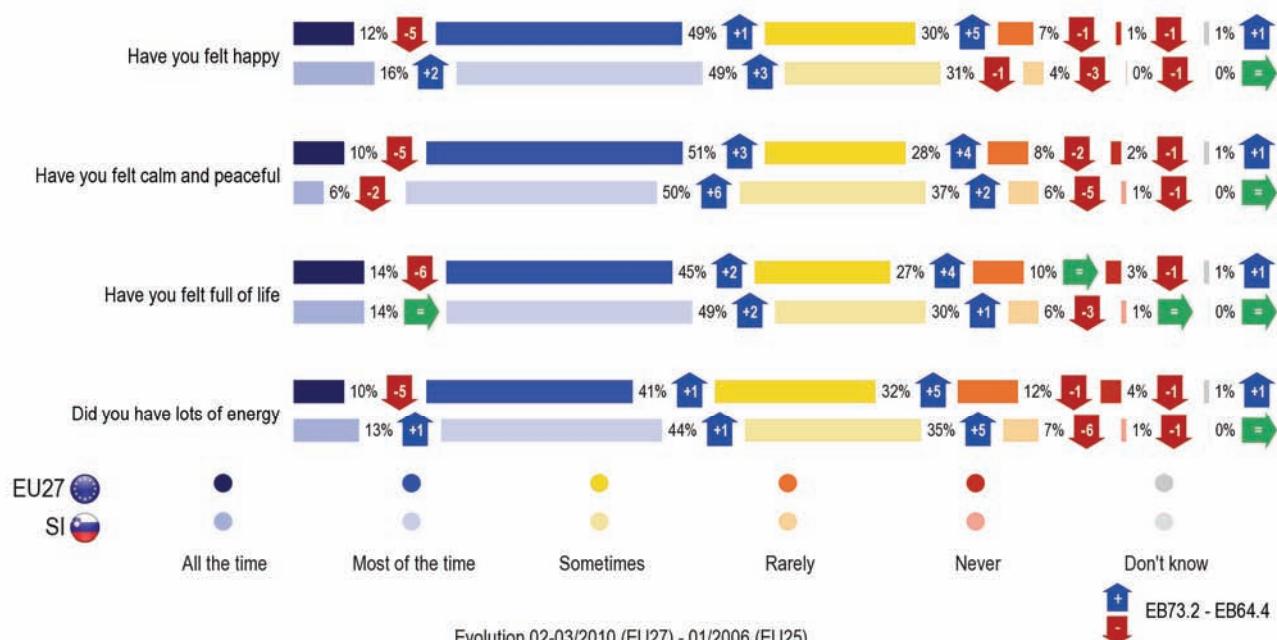

The same proportion of Slovenian respondents as average felt they did not accomplish less because of either a physical or emotional problem (physical 'never' 39% and emotional 'never' 54% vs. EU averages of 41% and 53% respectively). The proportion of Slovenian respondents who sought help from a professional in the past 12 months has not increased since 2006 (+1 percentage point) and is less than the EU average (12% vs. EU average of 15%).

The proportion of Slovenian respondents taking antidepressants in the last 12 months is the same as the EU average (8% vs. EU average of 7%). However, fewer Slovenian respondents took antidepressants for depression (39% vs. 51% average) or anxiety (39% vs. 47% average) and more than average took antidepressants for chronic pain (27% vs. 16% average) and to enhance performance (19% vs. 8% average).

Overall, absenteeism from work appears to be similar to the European average; however, among Slovenian respondents, absence for '6-10 days' is double the EU average (6% compared to 3% on average). In terms of attitudes to work, Slovenians are more dissatisfied than average with recognition received at work (26% disagree vs. EU average of 19%). Slovenians are equally as concerned as other Europeans that their job is under threat (24% vs. EU average of 25%) and they are more satisfied than average that their job matches their skills.

## 1. The state of Mental Health

QD2. How often during the past 4 weeks...?
