## Summary text

Bulgarian respondents felt less 'happy' and more 'down in the dumps' than other Europeans; only 46% felt 'happy' 'all' or 'most of the time' vs the EU average of 61% and 69% 'never' or 'rarely' felt 'down in the dumps' compared to 74% on average. Bulgarian respondents also felt more tense than average, 21% felt 'particularly tense' 'all' or 'most of the time' compared to 15% on average. However, Bulgarian respondents appear to have more energy than other Europeans, 62% and 58% 'felt full of life' and had 'lots of energy' 'all' or 'most of the time' compared to 59% and 51% on average. In addition, fewer Bulgarian respondents felt 'worn out' or 'tired' than average (61% and 33% 'never' or rarely felt these emotions vs. the EU averages of 47% and 26%). Also on a positive note, fewer Bulgarian respondents felt 'downhearted and depressed' than average (74% 'never' or 'rarely' felt this way compared to the average of 66%).

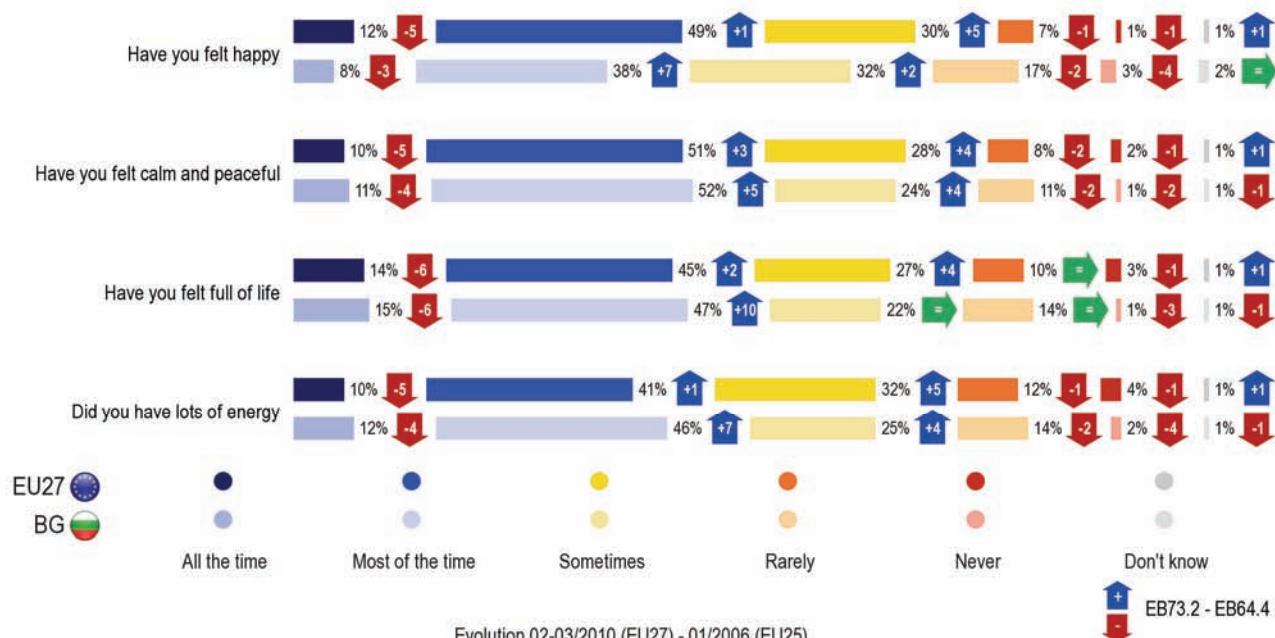

More Bulgarian respondents felt they had accomplished less as a result of a physical or emotional problem than other Europeans. Only a third of Bulgarian respondents (33%) felt they had 'never' accomplished less as the result of a physical problem compared to the average of 41% and only 38% felt the same about the impact of an emotional problem (vs. the EU average of 53%). Only 6% of Bulgarian respondents sought help from a professional in the past 12 months (vs. EU average of 15%), which has decreased significantly since 2006 (-10 percentage points).

Fewer than average have taken antidepressants in the last 12 months (4% vs. EU average of 7%). However, more Bulgarians took antidepressants for anxiety (65%) than depression (31%), whereas across Europe they are taken equally for depression and anxiety.

In terms of comfort at work, Bulgarian respondents are more concerned than average about their job security, with 29% agreeing that their job is under threat compared to the average of 25%.

## 1. The state of Mental Health

QD2. How often during the past 4 weeks...?
