Summary text

Overall, Czech respondents were more positive emotionally than average. More Czech respondents than average felt 'calm and peaceful' (71% 'all' or 'most of the time' vs. EU average of 61%) and fewer felt 'downhearted and depressed', 'particularly tense', 'worn out' and 'tired' than average. However, there were also two emotions on which Czech respondents were less positive than average; fewer Czech respondents felt 'happy' and 'full of life' 'all the time' (9% and 10% respectively compared to the EU averages of 12% and 14%).

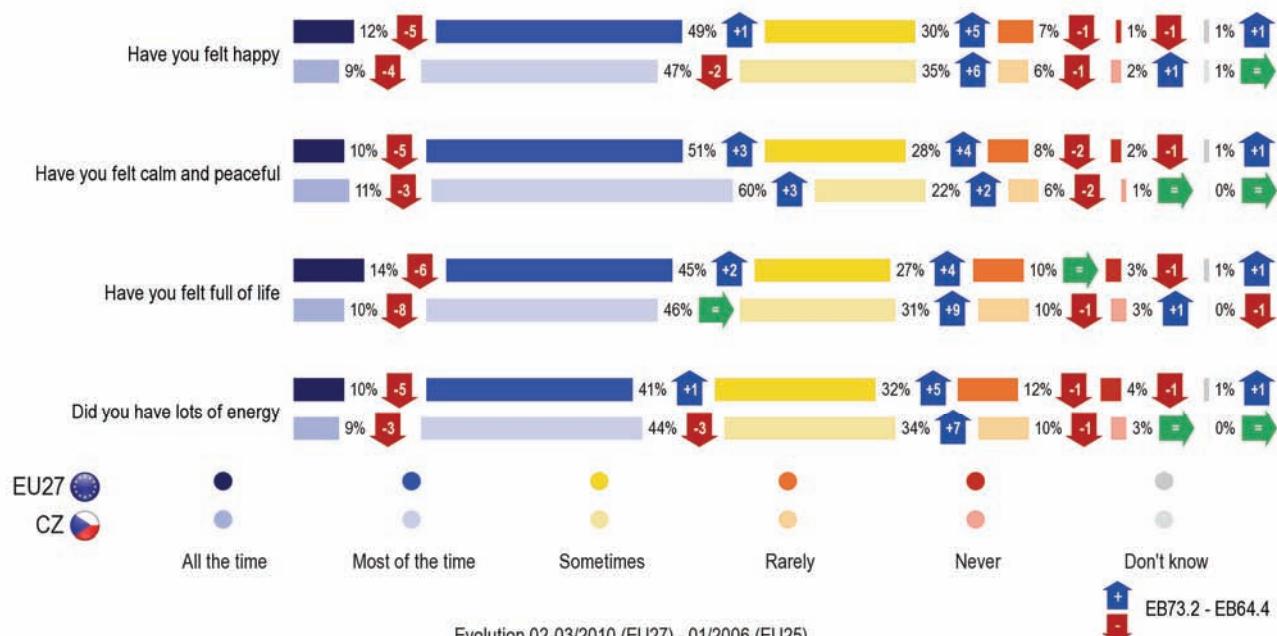

More Czech respondents than average have 'sometimes' or 'rarely' accomplished less than they would have liked because of a physical problem (26% and 30% respectively vs. EU averages of 23% and 21%). Whereas, the proportion who felt an emotional problem had 'never' prevented them from accomplishing less in the last four weeks was the same as the EU average (52% vs. EU average of 53%). Added to which, more than average felt they had 'rarely' accomplished less and fewer than average felt they had accomplished less 'most of the time' as the result of an emotional problem. The proportion of Czech respondents who sought help from a professional in the past 12 months was the same as the EU average (15% sought help) and has not changed significantly since 2006. However, it is interesting to note that the proportion who sought the advice of a pharmacist (6%) is double that of the EU average.

The proportion of Czech respondents taking antidepressants in the last 12 months is the same as the EU average (5% vs. EU average of 7%). However, fewer Czech respondents than average took antidepressants for depression (35%) and more than average took them for chronic pain (20% vs. EU average of 16%).

There is a higher level of unexplained absenteeism than average among Czech respondents (14% Czech respondents absent for 6-10 days vs. EU average of 3%). Czech respondents expressed higher than average discontentment with all three employment attributes.

1. The state of Mental Health

QD2. How often during the past 4 weeks...?
