Summary text

Overall, UK respondents are experiencing positive emotions less and negative emotions more frequently than EU citizens on average. The only exceptions are that they have experienced feeling 'happy' more (70% 'felt happy' 'all' or 'most of the time' vs. the EU average of 61%) and 'particularly tense' less (12% felt 'particularly tense' 'all' or 'most of the time' vs. the EU average of 15%). In addition, more have 'never' or 'rarely' felt 'down in the dumps' (77% vs. EU average of 74%) or 'downhearted and depressed' (70% vs. EU average of 66%).

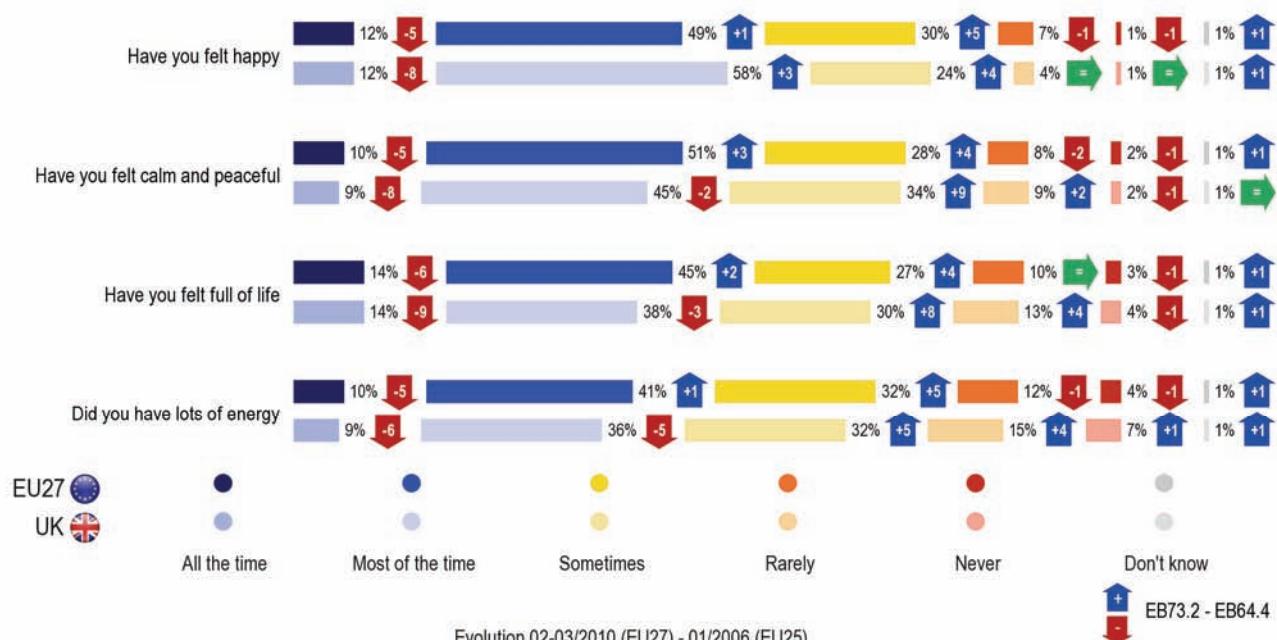

UK respondents are less likely than average to feel they have accomplished less as the result of a physical or emotional problem; with 48% and 56% of respondents feeling they have 'never' accomplished less as the result of a physical or emotional problem (vs. the EU averages of 41% and 53%). In addition, they are less likely than average to have sought help from a professional in the past 12 months; about one in ten (12%) have sought help, which is the same as in 2006. The professionals that UK respondents sought help from is similar to other Europeans with the exception of pharmacists; UK respondents did not seek the help of pharmacists regarding psychological or emotional problems whereas across the EU 3% of citizens did.

The proportion of UK respondents taking antidepressants in the last 12 months is the same as the EU average (8% compared to the EU average of 7%). However, in the UK respondents are mainly taking them for depression (66%) and less for anxiety (42%), whereas across Europe antidepressants are taken equally for depression and anxiety (51% and 47% respectively).

In terms of comfort at work, UK respondents felt most dissatisfied with the match of their current job and skills, about three in ten (29%) disagree that their current job adequately reflects their education and training, significantly more than the EU average of 23%. With regard to concern about job security and recognition for efforts and achievements, UK respondents felt the same as European citizens on average.

1. The state of Mental Health

QD2. How often during the past 4 weeks...?
