Subject: Solutions to secure pharmaceuticals with track and trace features

Dear Ms/Sir,

We, Stralfors, are manufacturer of anticounterfeit products for various industries. Stralfors is an IT company with a graphical heritage and this gives us a unique platform for anticounterfeit combat.

I have read the paper dated March 11 2008 regarding consumer goods, pharmaceuticals and the "ideas for better protection of patients against the risk of counterfeit medicines". In this article can I see the need for a simple and reliable solution to secure pharma products.

Today can we adapt the same technology for different pharma products (secondary packaging) and together with a selfcontained track and trace solution. This and other physical possibilities are what we can provide together with a long experience in this area.

I hope that this email will be forwarded to the right authority so that we can have a further discussion in this matter as this question is raised all over Europe

Best regards,

Daniel Johansson.
