Federation of Polish Patients endorses the EPF's final response to the Commission's consultation on the legislative proposal on Information to Patients.

We entirely agree with the EFF's standpoint concerning the matter that all patients have an elementary and legitimate rights to access quality information about their health, medical condition, treatments etc. Therefore in FPP opinion the key issue is to reduce differences in treating patients in spite of their disease, condition, background or nationality.

Sincerely,

Sylwia Brandt

FPP Project Manager
