Europe's Beating Cancer Plan

Diagnosis and treatment

Start date – end date

01/01/2024 – 31/12/2025

Countries

Belgium, Croatia, Cyprus, Greece, Hungary, Ireland, Italy, Lithuania, Malta, Netherlands, Norway, Poland, Romania, Slovenia, Slovakia, Spain, Sweden

Overall budget

EUR 1 250 000

EU contribution under EU4Health programme

EUR 1 000 000

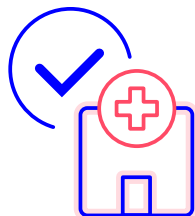

OriON– Joint Action on Contribution to the Cancer Inequalities Registry to Monitor National Cancer Control Policies

The OriON Joint Action aims to support the Cancer Inequalities Registry in identifying trends, disparities and inequalities in cancer prevention and care between and within European Member States and regions. This will help with target investments and interventions and ultimately lead to a reduction in measurable disparities in cancer prevention and care across the EU.

Across Europe, the possibility of receiving a timely cancer diagnosis and of surviving the disease differs considerably because of inequalities in preventive policies, access to state-of-the-art diagnostics and treatments, and experienced care. In a future European Health Union that seeks to protect everyone, all described disparities and inequalities are unacceptable. The Joint Action on Contribution to the Cancer Inequalities Registry to Monitor National Cancer Control Policies (OriON) will help to **reduce cancer inequalities across the Union.**

The aim of the OriON JA is to make available a mainly **qualitative analysis of the national cancer control situation in the Member States**, including the state of play of implementation of Europe's Beating Cancer Plan at national level in a comparable and frequently updated form as well as to make available **data and insights on socio-economic inequalities** to complement and enhance the analysis for the [Cancer Inequalities Registry](#).

Targeted investments and interventions

OriON will seek synergies with the Cancer Inequalities Registry to address trends, disparities and inequalities between MS and regions through targeted investments at EU, national and regional level. The expected impact will be a reduction in measurable disparities in cancer prevention and care across the EU.

Results from the Joint Action will provide critical information on the breadth and scope of cancer control actions across EU Member States, as illustrated in the implementation of Europe's Beating Cancer Plan and national cancer policy plans. Qualitative analyses which will represent a new approach will be central to the project as they are describing the policy situation in Member States and are the main focus of this Joint Action.
