**Ref.1: EUROPEAN COMMISSION HEALTH AND CONSUMERS DIRECTORATE-GENERAL
 Health systems and products, Pharmaceuticals; Comments to the delegated act**

**Ref.2: Consultation item no13: Please raise any other issue or comment you would wish to make
 which has not yet been addressed in the consultation items above.**

Dear Sir's!

FO Fotorotar AG, based in Zürich, Switzerland. and JURA Trade Kft, from Budapest, Hungary, have developed a security feature for authentication as well as for tracking. The feature can be implemented into 2D codes of all types, like QR, Data Matrix, Aztec or Boleno. Reading and printing of the feature can be done with standard industrial devices, with the help of a reader application.

FO Fotorotar AG is a manufacturer of governmental security documents, as well as stock and bond certificates, public transport tickets or coupons and vouchers.

JURA Trade Kft is the leading supplier of soft and hardware for the prepress of banknote and passport printers worldwide.

The security feature IQ-R is serialized and together with a smart phone or any standard code reading device, the feature can facilitate the authentication and tracking of a product. All actions can be logged in a data base and are available for review and analysis. The feature is mainly an IT product, and can be implemented without new reading devices or printing tools.

We offer this feature on a software license basis, but also can offer it in alternative ways.

Please see enclosed a presentation of the product.

With best regards

FO Fotorotar AG
