STAMP Working Group

Draft - Proposal for a framework to support not-for-profit organisations in drug repurposing

Members of the Group:

- Member States (Belgium, The Netherlands, Norway, Spain, Sweden, United Kingdom)
- European Medicines Agency (EMA)
- Anticancer Fund
- European Society of Paediatric Oncology (SIOPE)
- European Federation of Pharmaceutical Industries and Associations (EFPIA)
- Medicines for Europe
- European Patients' Forum
- European Organisation for Rare Diseases (EURORDIS)
- European Confederation of Pharmaceutical Entrepreneurs (EUCOPE)
- Association Internationale de la Mutualité (AIM)
- European Commission representatives

MAA: Marketing Authorisation Application
MAH: Marketing Authorisation Holder
NCA: National competent authority
SA: Scientific advice
SmPC: Summary of product characteristics
STAMP: Safe and Timely Access to Medicines for Patients
SPC: Supplementary protection certificates

STAMP Working Group – proposal for a repurposing framework

1. Introduction

Drug repurposing is the process of identifying a new use for an existing drug/active substance in an indication outside the scope of the original indication. Normally a marketing authorisation holder (MAH) initiates variations and extensions within the company's development plan to an approved medicinal product. This document considers the circumstances when a not-for-profit party has an interest in an indication of an already authorised medicinal product that is off-patent and out of regulatory protection. Such initiatives are continuously ongoing but may have low visibility and awareness within the regulatory framework. Repurposing of approved medicines that is not led by a MAH constitutes a dynamic field of drug development that can span from the very innovative to already accepted non-approved practices in medical care, often led by clinical and academic units and medical research charities. Repurposing includes finding new therapeutic uses for already known drugs (repositioning), developing different formulations for the same drug (reformulation), and creating new combinations of drugs previously used as separate products (novel drug combination).

The issues surrounding the challenges of repurposing of established medicines has been discussed in meetings of the Safe and Timely Access to Medicines for Patients (STAMP) Expert Group. A working group including representatives from Member States, the European Medicines Agency (EMA) and stakeholders from industry, not-for-profit organisation, patient, healthcare and payer representative organisations was formed to consider a framework for repurposing. STAMP observations were that the main rate-limiting steps and disincentives for not-for-profit organisations in repurposing projects concerned the lack of knowledge and resources in terms of understanding the regulatory routes and requirements, what additional data may exist or needs to be generated de novo to support a marketing authorisation application (MAA), how to access industry non-published clinical and non-clinical data, how to find a MAH of the finished product to collaborate with etc. Such organisations are normally not equipped, do not have the resources or do not have the intention to legally take the role as applicant/MAH when seeking approval or for fulfilling post-marketing responsibilities. However, they are often involved in generating data and in analysis of data from different sources.

2. Scope

In order to address some of the barriers and hurdles identified by STAMP, the aim of this proposal is to provide a visible supportive framework to a not-for-profit stakeholder (termed Champion), who has evidence and scientific rationale for a new indication that fits the criteria below, with the aim of bringing a new indication on-label.

In this regard, the working group proposed a targeted scope to support not-for-profit organisations, taking into account the following considerations:

- The repurposing framework is the process of facilitating data generation in accordance with regulatory standards of a new therapeutic use for an authorised active substance – outside the scope of the original authorised indication(s) - with the purpose of seeking its authorisation.
- The elements discussed below cover only one possible scenario of repurposing of medicinal products, namely the one where medicines are already out of basic intellectual property (IP)/regulatory protection.

100

101 **3. Key-features of STAMP repurposing framework**

102 The framework for repurposing of a medicinal product (MP) without basic IP protection and data
103 exclusivity may be described as voluntary steps within the existing regulatory framework. The
104 framework is open to champions and applicable to both EMA or national competent authority
105 (NCA) interactions. However, it should be noted that individual Member States (MS) may have
106 different policies and resources. Some key milestones of the repurposing framework are not
107 regulatory activities, e.g. the repurposing Champion (see definition below) finding an interested
108 marketing authorisation holder and concluding on the necessary agreements and ensuring that IP
109 and exclusivity rights are not infringed. However, Champions may lack experience with conducting
110 registration trials and scientific advice is needed at an early stage to ensure that the regulatory
111 requirements are understood and applied.

112 **3.1 Core components of the targeted repurposing projects**

113 The following attributes should be considered for the repurposed medicinal product(s) targeted
114 under this proposed framework, in particular, for a future repurposing pilot:

- 115 **1** The proposed new indication for an authorised active substance should be in a condition
116 distinct to the currently authorised indication(s) listed in section 4.1 of the relevant summary
117 of product characteristics (SmPC) of a MS or the European Union (EU)
- 118
- 119 **2** The targeted indication should be in an area where important public health benefits / Union
120 interests are likely to be achieved
- 121
- 122 **3** There should be a valid MA granted in a Member State or in the European Union for the
123 medicinal product containing the concerned active substance
- 124
- 125 **4** Relevant authorised medicinal products containing the concerned active substance should be
126 out of basic patent/ supplementary protection certificate (SPC) protection, and data and
127 market exclusivity periods
- 128
- 129 **5** A Champion takes the initiative and is willing and able to take forward the roles and
130 responsibilities required of the framework and whose goal is to facilitate the bringing of the
131 new indication to a label. A Champion can be for example a person or entity/academic
132 unit/learned society/research fund or payer with a particular interest in repurposing an
133 authorised medicinal product for a new indication, and who has data evidence/scientific
134 rationale to do so. Champions based both within and outside the EU are, in principle, eligible.

135
136 A Champion is typically characterised by the following:

- 137
- 138 a. Is not a pharmaceutical company or is not financed or managed by private profit
139 organisations in the pharmaceutical sector ("PPO"), nor has concluded any operating
140 agreements with any PPO concerning their sponsorship or participation to the specific
141 research project at the time of entry into the framework
- 142 b. Is able to coordinate and / or foster the research programme up until the point of full
143 industry engagement
- 144 c. Is initially responsible for liaising and leading the interactions with regulatory
145 authorities and industry / other stakeholders such as patient groups
- 146 d. Is transparent regarding interactions with relevant pharmaceutical company(s)
- 147 e. Files the initial request for scientific/regulatory advice on the basis of the available
148 data
- 149 f. Where feasible and appropriate, provides information to the MAH during the MAA
150 submission / process (e.g. regarding GCP compliance of the clinical trial(s),
151 responses to questions from regulatory authorities)
- 152
- 153 **6** There should be some supportive clinical evidence. It could include documentation from clinical
154 trials, off label use, registry data, or reported case studies.

155
156 In summary, the repurposing framework is defined by the aim to foster the authorisation of a new
157 indication to unprotected off-patent medicinal product where some data have already been
158 generated.

3.2 Regulatory engagement (Scientific or regulatory advice)

Scientific Advice (SA) and/or regulatory advice (through EMA and NCA) are the main tools that are considered important to support repurposing projects. Guidance can be provided to the Champion on the regulatory and scientific aspects of the project (and with joint health technology assessment (HTA) advice as appropriate). The advice will be instrumental for regulators and Champions to discuss the data package in relation to regulatory requirements, and available regulatory routes. The outcomes of the SA could be made available under due diligence in the context of encouraging engagement with MAH(s), but the timing of this will remain at the discretion of the Champion. A data package generated in accordance with the regulatory requirements and compliant with the scientific advice is of utmost importance to facilitate the uptake by a business company.

The future full assessment by regulators of the data in support of a new indication will follow an existing pathway for an application to the EMA, or NCAs e.g. variation, extension or new MAA by either the originator or a generic/biosimilar MAH/applicant, whereby it could allow the granting of a new indication if successful.

3.3 Industry engagement

Industry engagement in the pathway can be envisaged in two stages:

3.3.1 Before the Champion seeks Scientific Advice

At this point, the Champion may choose to contact one or more of the existing MAH(s) for the product or active ingredient of interest, in order to seek their views or input on the proposed new use. Identification of the MAH(s) will be facilitated through the EMA's Article 57 database, and MAH companies will be encouraged to create a dedicated e-mail address for repurposing enquiries to be included on their websites. The originator of the product, if identifiable, will often be best placed to provide input and still hold a MA for this product in the EU; however other MAHs may equally have relevant insights, experience or interest in relation to the proposed use.

The input provided may range from none at all, if the MAH has no relevant knowledge or experience, to commentary from the MAH as to what they know, or have learned, or can hypothesise about the proposed new use from their own development and/or post marketing experience, and may extend to data sharing or exchange and even collaboration with the Champion in seeking Scientific Advice. The nature of the input provided will depend on the individual circumstances of the product and proposed new use and the available knowledge, experience, data and capacity of the MAH.

3.3.2 After the Champion has obtained Scientific Advice

This is the key point for industry engagement in the repurposing pathway. The Champion will contact the MAHs (originator and/or others, as described above) with a view to sharing the output from the Scientific Advice and establishing the potential for at least one MAH to obtain regulatory approval for the new indication via an MA variation. The MAH, at its discretion, will need to consider:

- the scientific basis for the new indication and whether they have expertise in the therapeutic area;
- the needs of patients;
- whether all the necessary data have already been generated or if not, what further trials or measures are required to support the variation;
- if more trials are needed, the practical and economic feasibility of generating further data;
- the practical and economic feasibility of any manufacturing/formulation changes that might be required;
- the practical and economic feasibility of preparing for, submitting and maintaining the variation;
- the likely post-marketing, risk management and pharmacovigilance requirements which the MAH would have to support;
- and the legal/liability risks in general that may potentially be entailed for the MAH in bringing forward the new indication.

In general terms, if the practical, economic and legal burden is manageable and the scientific basis and unmet medical need are convincing, then one or more MAHs are more likely to be interested in pursuing an MA variation for the proposed new indication.

218 If and when an MAH decides to pursue the necessary variation to their MA, the Champion will need
 219 to provide the MAH with the relevant data to enable the MAH to (i) prepare the necessary updates
 220 to the dossier, (ii) file the variation and (iii) respond to questions from the regulatory
 221 authority(ies). If Good Clinical Practice (GCP) inspections are deemed necessary, the MAH will
 222 need the Champion to act as or provide a link to the clinical trial site(s) and investigators.

223 3.4 Incentives – disincentives

224 Both legal and non-legal incentives may be important to different stakeholders. There are some
 225 incentives within the European regulatory framework (e.g. orphan designation, additional
 226 protection periods) and other types of incentives may also exist in different MS. Barriers may
 227 include the cost of the scientific advice and difficulties in finding a willing and supportive MAH. For
 228 industry the nature of the business case will be important as well as minimising the perceived
 229 barriers (ease / feasibility of MA submission, additional pharmacovigilance requirements).

230 Outline of Key components of the currently proposed framework

	Phase	Description
1	Pre-entry	Champion identifies and has an interest in a new indication. Champion to approach EMA and/or NCA after cross checking the suitability of the project against the scope criteria (see section 3.1 for details)
2	Pre-entry	Using identified data sources and / or own data, the Champion submits the proposal to enter the framework to a regulatory authority (EMA or NCA) for a repurposing scientific or regulatory advice meeting using the relevant template and topic check list that might include (but not limited to) the following aspects: <ul style="list-style-type: none"> - Medicinal product - Proposed repurposing indication (prevention, treatment or diagnosis of disease) - Description of the existing supporting data for indication and proposals for future data generation - Scientific rationale - Discussions on available incentives as appropriate - Approaches for accessing data - Considers industry collaboration (use Article 57 database¹ to determine list of MAH, Co-ordination Group for Mutual Recognition and Decentralised Procedures – Human (CMDh) MRI² Product Index³, access to list of industry contacts).
3	Repurposing SA	Regulatory authority conducts meetings according to their practice with the Champion and as applicable other relevant stakeholders (MAHs, patient groups, HTA bodies, clinical investigators, other). Discussion on the proposals.
4	Feedback	Regulators provide feedback (non-binding advice) on the current and future development programme, taking into account the overall proposals and the available data. Regulators can signpost to different existing regulatory routes and

¹ Article 57 database on all medicines authorised in the European Economic Area (EEA) - <https://www.ema.europa.eu/en/human-regulatory/post-authorisation/data-medicines-iso-idmp-standards/public-data-article-57-database>

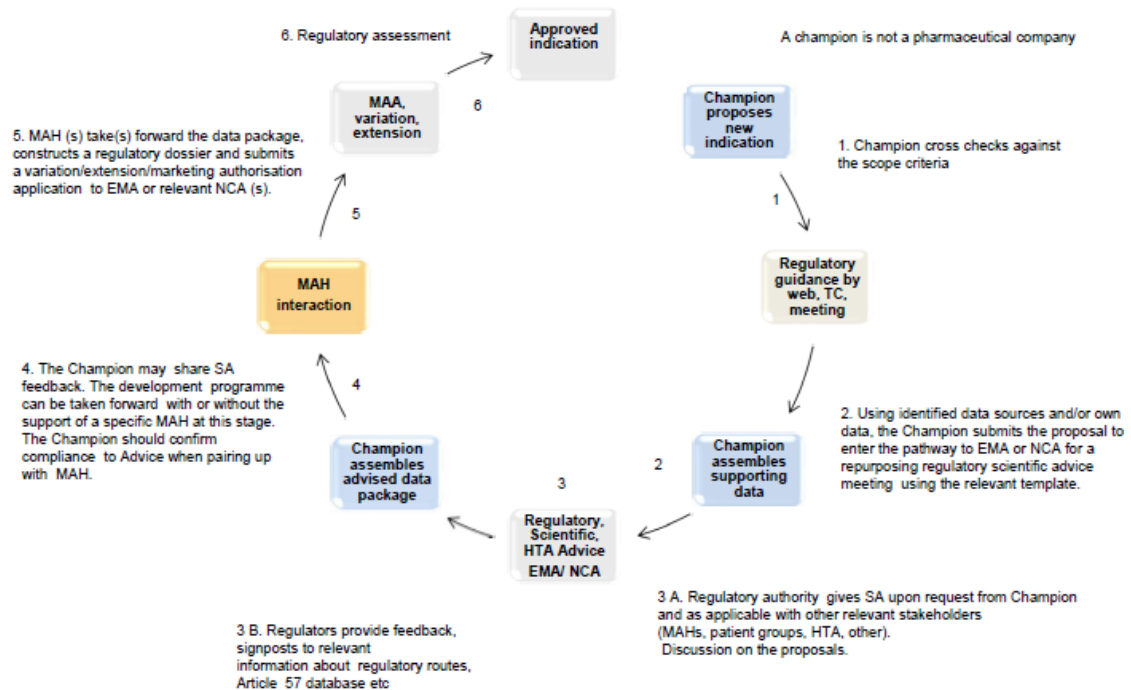

² MRI - mutual recognition information

³ <http://www.hma.eu/mriproductindex.html>

		incentives where appropriate.
5	Post scientific meeting	<p>Champion takes forward the recommendations and are expected to follow advice from the regulatory authority.</p> <p>The Champion considers the timing for engaging with a potentially interested MAH, if no collaboration has previously been sought or been successful – the Champion is encouraged to take forward the development programme with or without the support of a specific MAH as far as possible.</p> <p>The Champion may make the scientific advice feedback available to other partners to stimulate interest in the repurposing project.</p> <p>At the time of linking the project development programme to a collaborating MAH, the Champion acknowledges compliance alignment with the advice given by the regulatory authority, e.g. additional clinical trials or non-clinical studies conducted, data analysis (or is expected to provide justification for any deviation) and liaises with an interested MAH.</p> <p>If no suitable MAH can be found, the Champion may approach the regulatory authority to consider what other regulatory activities might be considered.</p>
6	Licensing route	MAH holder(s) take(s) forward the data package and submits a variation/extension/MAA to EMA or relevant NCA.

233
234

Repurposing of MP's out of patent & data protection

235
236
237

238 **Summary**

- 239 • A Champion puts forward sufficient supporting data for a new indication to an unprotected
240 off-patent MP to be discussed in a repurposing regulatory scientific advice meeting.
241
- 242 • A Champion can be a person/entity/academic unit/learned society/research fund/payer
243 with no linked with a private profit organisations and with a particular interest in
244 repurposing an authorised medicinal product for a new indication and who has data
245 evidence/scientific rationale to do so.
246
- 247 • The repurposing regulatory scientific advice provides comments and feedback on the
248 presented data package components, and the requirements of any future data generation
249 (if required).
250
- 251 • On the basis of the advice, the Champion conducts further development and/or
252 consolidation of the available data.
253
- 254 • The Champion seeks an immediate or future partnership with (a) MAH(s) depending on the
255 stage of the development.
256
- 257 • For the purpose of filing the data to support a new indication, the Champion / MAH
258 confirms that the available data are in compliance with the advice given by the regulatory
259 authority (or is expected to provide justification for any deviation).
260
- 261 • The MAH(s) seek(s) an extension or variation or a MA using the existing regulatory
262 pathways if the data package are considered robust. MA approval may or may not include
263 post authorisation measures (as appropriate).
264

265 **Conclusion/ next steps**

266 The working group has agreed a framework to support a Champion with a repurposing proposal. In
267 order to test the framework, it was agreed that a pilot should be conducted to test the proposals,
268 learn from the practical applications of candidates in the framework and build on the concepts
269 identified. The context and the objectives of the pilot are summarised below.
270

271 **PILOT OF THE STAMP REPURPOSING FRAMEWORK**

272 **Objectives and deliverables**

273 The overall aim of the pilot is to assess whether the proposed framework is able to facilitate a MAA
274 for a new indication for an off-patent medicinal product.

275 From a regulatory perspective, the proposed framework utilises the existing scientific advice (SA)
276 route at national or European level, in order to discuss existing evidences as well as evidence
277 generation packages. Other elements like identification of suitable candidates, uptake of scientific
278 advice, industry engagement and opportunities for fee incentives and regulatory designations will
279 be explored. It is expected to be a learning exercise providing insight into the characteristics of
280 repurposing development programmes in order to support champions in generating a data
281 package that can meet the scientific and regulatory requirements.

282

283 Therefore, the following aspects will be addressed:

- 284 • Assessment of the clarity and comprehensibility of the core components and milestones of
285 the framework from the champion's and industry perspective.
- 286 • Identification of gaps in the existing guidance available on the EMA/HMA⁴/NCA websites
287 that may be applicable to repurposing, and evaluation of the potential need for adaptations
288 (or new guidance documents/ templates), or the need for a repurposing handbook.
- 289 • Feasibility of compiling the required information/data for the scientific advice application
290 from the champion's perspective.
- 291 • Applicability of the Article 57 database and/or the CMDh MRI product index for identifying
292 the MAHs and indirectly the originator, where applicable
- 293 • Opportunities for identification of potential candidates for repurposing
- 294 • Assessment of proposed framework from the perspective of attractiveness/ fit for purpose
295 for the industry
- 296 • Adjusting the roles and responsibilities of the champion, regulatory authorities and
297 industry in the framework according to experience gained.

298

299 **Deliverables**

300 **Short term:**

- 301 • Identification of list of specific candidates for repurposing (active substance, target
302 indication) and the respective potential champion(s)
- 303 • Application(s) for SA, compliant with applicable requirements and understanding of
304 scientific advice scope and outcome letter
- 305 • Project progress further to SA i.e. continuation of programme development and compliance
306 with scientific advice outcome

307

308 **Long term:**

- 309 • Uptake of a repurposing candidate by one or more business companies or consider lessons
310 learned in case of no uptake of the project by any business company
- 311 • If appropriate, an application for a variation by a MAH or a new MA with the repurposed
312 indication
- 313 • In case of no uptake by industry and appropriate evidence generated by champion in
314 compliance with SA explore, where possible, what might be the next steps

315

316

317

⁴ Heads of Medicines Agencies

318 **Potential candidates for pilot**

319 A single candidate for the pilot will not be representative of all repurposing scenarios and should
320 be selected carefully. It might be of interest to pilot (3) different type of scenario amongst the
321 following:

- 322 ○ Candidates in late-stage or early-stage development, candidates containing active
323 substance originally authorised via national or centralised procedures, various data
324 sources supporting different repurposing proposals (literature, clinical trials, real-
325 world data,...)
- 326 ○ The originator has an interest or not in the proposed repurposing project.

327
328 Anticancer Fund has identified 9 candidates which will be presented at the 11th STAMP meeting.
329 Participants will also be asked to come up with additional candidates.
330

331 **Identification of Champion**

332 For their candidate(s), Anticancer Fund is considering to approach the principal investigator(s) of
333 the clinical studies and to explore the possibility of joint champion responsibilities. European
334 and/or nation-wide scientific societies and/or professional associations may also provide a network
335 where champion's tasks are easier to carry out.

336

337 **PROPOSAL FOR A 'REPURPOSING MONITORING BOARD' DURING THE PILOT PHASE**

338

339 In order to provide support to potential champions and to monitor and conclude on the
340 repurposing framework, the STAMP working group concluded that it would be important to create
341 a voluntary virtual monitoring board.

342

343 The board will have a governance role and will be:

344

- 345 • Drawn from interested members of the current STAMP working group
- 346
- 347 • Provide an advisory role to the Champion to voluntarily discuss potential candidate
348 molecule(s) for the pilot
- 349
- 350 • Will convene as necessary but should be a specific point of contact for the Champions
- 351
- 352 • The board should monitor the progress of the pilot at regular intervals and should be
353 responsive to troubleshoot emerging challenges in a timely fashion
- 354
- 355 • The board should liaise with the Champion(s) and support the development of a written
356 report at the end of the pilot, which details the outcomes. The report should be available
357 in the public domain
- 358
- 359 • The board may consider it necessary to survey stakeholders regarding the successes and
360 challenges

361

Annex I: Useful resources, contacts and information on incentives in the EU

Resources	Description
EMA SCIENTIFIC GUIDELINES	<p>The European Medicines Agency's Committee for Medicinal Products for Human Use prepares scientific guidelines in consultation with regulatory authorities in the European Union (EU) Member States, to help applicants prepare MAAs for human medicines. Guidelines reflect a harmonised approach of the EU Member States and the Agency on how to interpret and apply the requirements for the demonstration of quality, safety and efficacy set out in the Community directives.</p> <p>https://www.ema.europa.eu/en/human-regulatory/research-development/scientific-guidelines</p>
Scientific advice / Protocol Assistance (for orphans)	<p>The European Medicines Agency (EMA) can give <u>scientific advice</u> and <u>protocol assistance</u> to medicine developers. For human medicines, <u>scientific advice</u> and <u>protocol assistance</u> are given by the <u>Committee for Medicinal Products for Human Use (CHMP)</u> on the recommendation of the <u>Scientific Advice Working Party(SAWP)</u>. <u>Scientific advice</u> is when the Agency gives advice to a developer on the appropriate tests and studies in the development of a medicine. This is designed to facilitate the development and availability of high-quality, effective and acceptably safe medicines, for the benefit of patients.</p> <p>https://www.ema.europa.eu/en/human-regulatory/research-development/scientific-advice-protocol-assistance</p>
EMA's Innovation Task Force (ITF)	<p>The ITF is a multidisciplinary group that includes scientific, regulatory and legal competences. It was set up to ensure coordination across the Agency and to provide a forum for early dialogue with applicants on innovative aspects in medicines development.</p> <p>Amongst ITF objectives is to establish a discussion platform for early dialogue with applicants, in particular <u>micro, small and medium-sized enterprises</u> (SMEs), academics and researchers, to proactively identify scientific, legal and regulatory issues of emerging therapies and technologies.</p> <p>https://www.ema.europa.eu/en/human-regulatory/research-development/innovation-medicines</p>
INCENTIVES	
Orphan designation	<p>About 30 million people living in the European Union (EU) suffer from a rare disease. The European Medicines Agency (EMA) plays a central role in facilitating the development and authorisation of medicines for rare diseases, which are termed '<u>orphan medicines</u>' in the medical world.</p> <p>Orphan designated medicinal products authorised for marketing in the EU are eligible for 10 years' market exclusivity for the orphan designated indication.</p> <p>https://www.ema.europa.eu/en/human-regulatory/overview/orphan-designation-overview</p>
Paediatric Use Marketing Authorisation	<p>Products which are authorised for a paediatric use pursuant to a paediatric investigation plan agreed by the EMA are eligible for a separate period of data and marketing protection (8+2 years) for that paediatric indication</p>

1 year data protection for well established substance	Well established substances authorised for a new indication are eligible for a non-cumulative period of one year of data exclusivity provided that significant clinical or pre-clinical studies were carried out in relation to the new indication
CONTACTS	
Member States, national competent authorities	<p>The (NCAs in the Member States can provide scientific or regulatory advice.</p> <p>A list of the NCAs is available on the Heads of Medicines Agency's (http://www.hma.eu/) webpages: http://www.hma.eu/nationalcontacts_hum.html</p>
EU Innovation Offices	<p>A network of EU Innovation Offices work on matters relating to emerging therapies and technologies that aim to make the regulatory support for medicines developers currently available at national and EU levels more visible. There is a list of contact points: https://www.ema.europa.eu/documents/other/eu-innovation-network-e-mail-addresses-users_en.pdf</p> <p>The links to the documents made available by individual Member States are:</p> <p>Spanish Office for Innovation (in English) https://www.aemps.gob.es/en/medicamentosUsoHumano/ofi-innovacion-conocimiento-med/home.htm</p> <p>UK Innovation office https://www.gov.uk/government/groups/mhra-innovation-office</p>

364
