

NOTE TO THE HEALTH INFORMATION COMMITTEE

Subject: European Health Information Strategy - update

The European health information strategy discussion paper has been reviewed at previous meetings, and is now available on the Commission website for any wider comments. Several actions in pursuit of this strategy are addressed elsewhere on the agenda of this meeting, including the development of key indicators and information sources; work with partner organisations; and new mechanisms for generating, presenting, updating and disseminating health information.

Discussions are also ongoing within the Commission and between the Institutions on future orientations, in particular the EU2020 strategy and the medium term financial orientations of the EU. This may provide opportunities to address the key medium-term issue of sustainability. We will keep the Committee informed at future meetings.

Action for the Committee:

	For information
