#Webinar on Climate Change and Health

Addressing Climate change impacts on health through national policies

The webinar on "Climate Change and Health - Addressing Climate change impacts on health through national policies" took place on Wednesday 16 March 2022, 10.00 - 11.15 CET, Brussels time.

This webinar was organised jointly by Directorate-General for Health and Food Safety, Directorate-General for Climate Action, and European Environment Agency. The webinar marked the first anniversary of the launch of the European Climate and Health Observatory under the EU Strategy on Adaptation to Climate Change.

Addressing climate change impacts on health in an effective manner requires actionable national policies. In particular, emphasis on protecting health in national climate change adaptation policies, and the consideration of climate change impacts in the national public health strategies are needed.

This webinar presented examples of integration of health and climate into national governance structures, policy and action from Finland, France and Germany. It has also presented the overview of the coverage of climate change impacts in national adaptation policies and national health strategies across the European countries.

- The **presentations** are available on the EU Health Policy Platform – Agora network. To access, please register first following this [link](#) (use/create your EU login).
