**Document: Summary of CT Results for Laypersons**

278, p.8 mentions that HRA has led on the development of these recommendations but major referenced documents are based on the US resources:

245 p.7 points to the guidance on numeracy (Harvard)  
261 p.8 mentions examples of visuals to be used (FDA)  
290 p.9 acknowledges Health Literacy Missouri input

We would expect that at least some of the referenced sources would come from the UK academia/qualitative research and the HRA/Ethics Committees debates etc.

Best wishes
