

Sum up yesterday's conference in one word

What are your impressions of the training package?

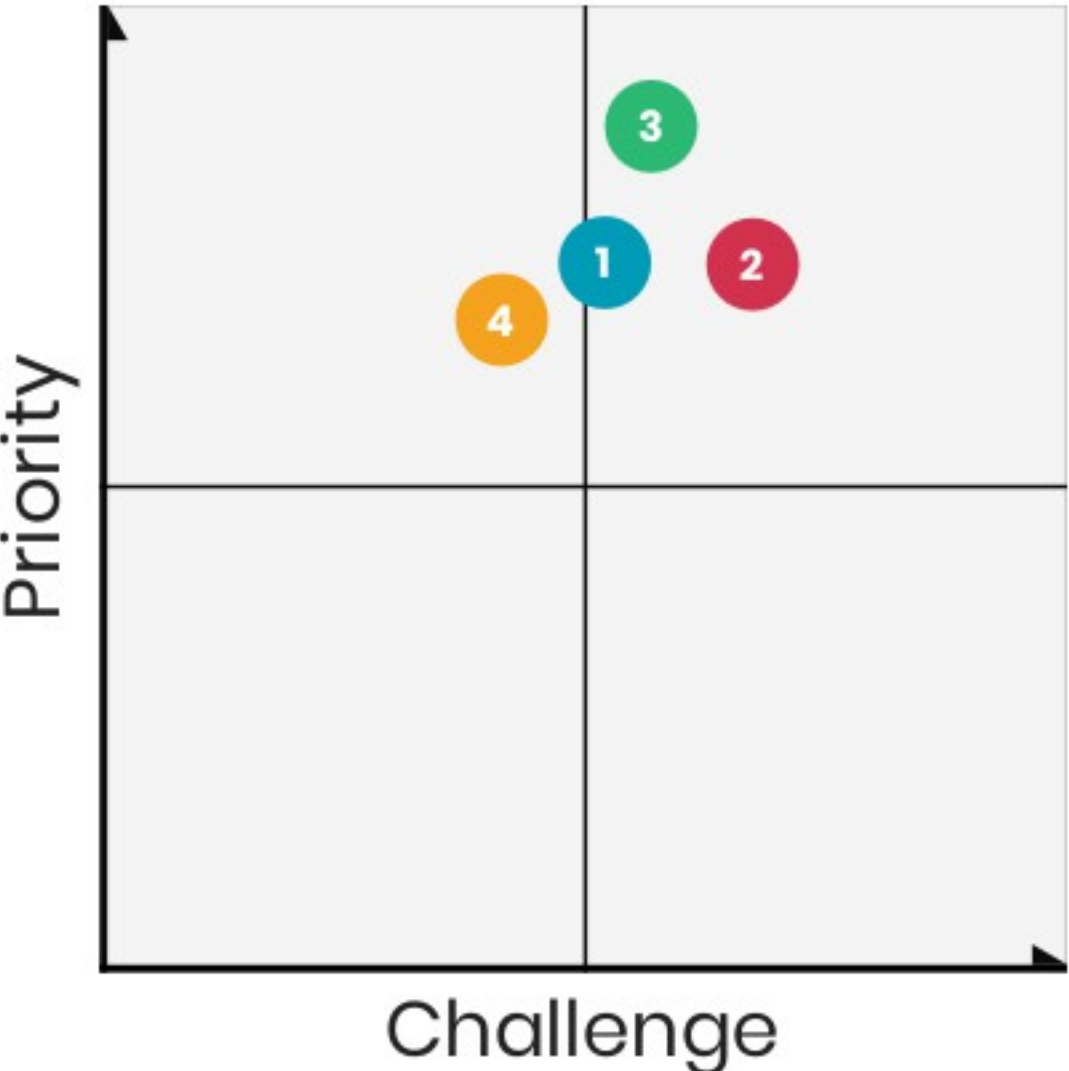

Will you be able to implement these training programmes in your work?

In one word, what is the key message to take home from these training modules?

To make health systems more LGBTI-inclusive, the priority should be to:

- 1 Adopt anti-discrimination laws
- 2 Mainstream LGBTI people health needs throughout national health systems
- 3 Train present & future healthcare professionals
- 4 Carry out further research

Would a follow-up conference to discuss measures to make health systems more LGBTI-inclusive be useful?
