Violence and Health

Human rights

Public health

Complex clinical entity

Holistic and integrated approach

Health professionals are often the first contact for victims of violence and are described by them as the professionals they would trust the most to support in problem resolution.

Health Action for Children and Youth at Risk-HACYR

- Assessment of resources to address child abuse and maltreatment in the NHS in 2006
- Definition of a structured response based on pre-existing good practices, namely in hospitals with paediatric care
- Working-group at the Directorate-General of Health, with the responsibility to build the model and the guidelines

Health Action for Gender, Violence and the Lifecycle-HAGVLC

- The need to broaden the spectrum of intervention led to the creation of HAGVLC, in 2013, aimed at interpersonal violence in adults.

Action Plan For the Prevention of Violence in the Health Sector

It is essential to reflect on violence in different health contexts from the perspective of prevention, but ensuring, in the event of its occurrence, an effective, swift and adjusted response to the needs of the victim

Safe and healthy work environments, prevent situations of violence increasing workers satisfaction and result in better quality services

The measures to be implemented must adequately address episodes of violence, supporting victims, reducing the consequences of violence and preventing future episodes, intervening on their causes

New Clinical Record of Violence in Adults

Primary Health Care and Hospital Care

Signaling to STCYR/TPVA

Evidence of impact

- Between 2008 and 2019, about 80,000 children were followed.
- 80% of these children did not need judicial intervention and were supported at the first level of intervention in their family, in their best interest.

Evidence of impact

- Since 2013, there is a tendency for an increase in the number of annual flags, in HAGVLC, provisory data from 2019 are close to 4000.
- Domestic violence is the prevalent type of violence in the global amount of cases flagged to the TPVA.

Positive aspects

- NHS in Portugal, has a free and universal coverage
- Early detection of risk factors by health professionals
- Maximizing results of intervention by promoting the articulation between primary and hospital care
- Promote intersectorial articulation and interventions

Positive aspects

- WHO recognized the HACYR as a good practice regarding protecting children and youth against violence
- The European Institute for Gender Equality recognized HAGVLC as a good practice

Obstacles, difficulties and challenges

- Improve human resources and availability of professionals
- Turnover of professionals

Obstacles, difficulties and challenges

- Continuous training
- Improve clinical digital platforms for Family Risk Assessment
