*The Joint Action ECHIM suggested 17 relevant policy areas for the ECHI indicators shortlist. DG SANCO has reviewed the allocation to policy areas and in order to make the ECHI shortlist more user friendly has merged some policy areas and set the ECHI shortlist up in a table with 12 policy areas. Both tables have been presented to the Expert Group on Health Information (EGHI). The main aim of the lists is to support policy makers in their choice of indicators for measuring and/or setting of policy but is not intended to be prescriptive for users.
